                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 APPLICANT: Fraunhofer Gesellschaft zur F"rderung der angewandten Forschung e.V.
TITLE OF INVENTION: Antibodies, recombinant antibodies, recombinant
TITLE OF INVENTION: antibody fragments and fusions mediated plant disease
TITLE OF INVENTION: resistance against fungi
FILE REFERENCE: 3581.01US01
CURRENT APPLICATION UNDER: US/10/512,184
CURRENT PILING DATE: 2004-10-22
NUMBER OF SEQ ID NOS: 72
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 71
LENGTH: 371

Patent No. 6172213
GENERAL INFORMATION:
APPLICANT: Henry B. Lowman, Leonard G. Presta, Paula M. Jardieu, John Lowe;
TITLE OF INVENTION: Improved Anti-IgE Antibodies and Method of Improving Polypeptide;
FILE REFERENCE: P1123R1
CURRENT APPLICATION NUMBER: US/09/109,207C
CURRENT FILING DATE: 1998-06-30;
PRIOR FILING DATE: 1997-07-03
NUMBER: OF SEQ ID NOS: 44

Disclosure; SEQ ID NO 69; 164pp; French.

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of

ö
           transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-1R and/or EGFR. This sequence represents a

The inversion fracters to a novel isolated anti-insulinity being capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding tromaine kinase activity of the receptor, capable of capable of himbiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acida (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a definition of the transduction pathway of the signal mediated by the interaction of IGF-IR and/or EGFR, and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induced to inhibit the transformation of normal cells into cells with tumoral construct, preferably IGF-dependent, especially IGF1 and/or IGF2-dependent and/or EGF-dependent and/or EGF-dependent and/or IGF2-dependent and/or IGF2-dependent
  invention relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of IGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  insulin-like growth factor-1 receptor, IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGI R and/or EGFR receptor is suspected, which involves contacting the biological sample with (I), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KPSLKDRISITRDTSKNOFFLKLNSVTNEDTATYYCARYGRVFFDYWGQGTTLTVSS 117

Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (IGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal calls, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a

The invention relates to a novel isolated anti-insulin-like growth factor

I receptor (IGF-IR) antibody (I) or its functional fragment, being
capable of binding to human IGF-IR and, if necessary, capable of
capable of binding to human IGF-IR and, if necessary, capable of
capable of binding to human IGF-IR and, if necessary, capable of
comprising a light or heavy chain having at least one complementary
comprising a light or heavy chain having at least one complementary
determining region (CRR) consisting of one of two fully defined 16 amino
control of ADZ67014). An antibody of the invention is useful in
the preparation of a medicament intended for the prevention or treatment
of an illness connected with an overexpression and/or an abnormal
activation of the IGF-IR and/or EGFR, and/or connected with a
hyperactivation of the transduction pathway of the signal mediated by the
cutivation of IGF-IR and/or EGFR, and/or of EGFR, with EGFR;
the administration of the medicament does not induce or only slightly
induces secondary effects connected with inhibition of the insulin
considering the antibody is useful for preparation of a medicament intended
control into and/or IGF-dependent and/or EGFR and/or IGF2-
capendent and/or EGF-dependent and/or HER2/dependent and/or HER2/dependent and/or HER2/dependent and/or HER2-dependent and/or HER2-dependent and/or IGF2-dependent and/or HER2-dependent and/or HER2-dependent and/or IGF2-dependent and/o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (1), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ä

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (1) inhibit natural binding of insulin-like growth actors (IGF)-1 and/or -2; and/or (11) inhibit specifically tyrosaine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with heir ligands. Especially they inhibit activity of these receptors with their ligands. Especially they inhibit account of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also orsted for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of expecifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal appearativation of the IGF-IR and/or connected with a nyereactivation of the IGF-IR and/or connected with a interaction of IGF1 or IGF2 with IGF-IR and/or of EGF with EGFR, where

Claim

```
the administration of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of an edicament intended to inhibit the transformation of normal calls into calls with tumoral character, preferably IGP-dependent, especially IGP1 and/or IGP2-dependent and/or HERZ/neu-dependent calls. [I] is useful for preparation of a medicament intended to inhibit the growth and/or the proliferation of tumor calls, preferably IGP-dependent, and/or IGP2-dependent in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, breast cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention or for the preparation of a medicament intended for the prevention or for the intended for the specific targeting of a biologically active compound to calls expressing or overexpressing the IGP-IR and/or EGRR receptor. (I) is useful for in vitro diagnosis of illnesses induced by an

Monoclonal antibody specifically recognising the Fas ligand - useful for the detection of Fas ligands either on cell surface or in solution.

```
The present sequence is the heavy chain variable region of the anti-human Fas ligand monoclonal antibody (MAb) NOK-4. NOK-4 is produced by the hybridoma NOK-4 (FERM BP-5047), which was prepared by immunising mice with transformed human Ras ligand expressing COS cells, and fusing spleen cells isolated from the mice with myeloma P3x63Ag8.653 (ATCC CR1-1580) cells. The MAb recognises the human Fas ligand on the cell surface or in solution, and can be used to inhibit the apoptosis inducing cell surface Fas ligand/Fas reaction. The MAb can also be used for a Fas ligand assay in biological samples (e.g. human blood), especially for disease diagnosis, e.g. hepatitis, infectious mononucleosis and systemic lupus erythematosus
                                                                                                                                                                                                                                                                                                                                  1 VQLQESGPGLVKPSQSLSLTCSVTGYSITSGYYWNWIRQFPGNKLEWMGYISYDGSNNYN 60

Anti-human Fas Ligand antibody to treat hepatitis – controls apoptosis in The present sequence is the heavy chain variable region of the murine anti-human Fas ligand (Fast) monoclonal antibody (MAD) NOK4, which is expressed by the hybridoma NOK4 (FERM BP-5044). The MAD can be used in the preparation of a composition for the effective oral or parenteral treatment of hepatitis, including hepatitis caused by hepatitis B or C virus. The composition controls apoptosis in liver cells caused by the Nakata M; Okumura K, liver cells and improves liver function. Claim 6; Page 36-37; 51pp; Japanese. (SUME ) SUMITOMO ELECTRIC IND CO. binding of Fast to Fas expressing liver cells, and improves liver function by improving blood glutamate oxaloacetate and pyruvate transaminase levels. The composition is given in a dosage of 0.0001-1000, preferably 0.01-600 mg/day. Spleen cells from mice immunised with Fast expressing COS cells were fused with mouse myeloma cells to produce hybridomas. The hybridomas were screened for anti-Fast activity, and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method for preparing variable region genes of high affinity tumor necrosis factor (TMF) resistant monoclonal antibody (F6 mAb). The method comprises using recombinant human TMF immune BALB/c mouse to prepare mouse anti-TMF monoclonal antibody, screening high

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to treating a human patient diagnosed with a B-cell malignancy. The method involves (a) administering to the human patient a blocking anti-CD22 monoclonal antibody binding to the first two Ig-like domains, or to an epitope within the first two Ig-like domains, or to an epitope within the first two Ig-like domains of native human CD22 (hCD22) (ABR8771) and (b) monitoring the response of the mailgnancy to the treatment. The method is useful for treating a human patient diagnosed with a B-cell malignancy comprising Hodgkin's lymphoma, Burkitt's lymphoma, multiple myeloma, chronic lymphocytic leukemia, hairy che amino acid sequence for heavy chain Vh-D-Jh junction for anti-CD22 antibody from hybridoma HB22-33
affinity F6 mAb using an indirect enzyme linked immunosorbent assay (ELISA). By cloning the monoclonal antibody light chain and heavy chain variable region (VI, and VH respectively) genes, the monoclonal antibody light chain and heavy chain variable region gene sequence and amino acid sequence can be obtained, and the unicity of the gene sequence and protein sequence can be confirmed. This sequence represents the amino
                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                           63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CD22; B-cell malignancy; anti-CD22 antibody; cytostatic; human; HB22-33.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Hybridoma HB22-33 anti-CD22 MAb heavy chain Vh-D-Jh junction sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to treating a human patient diagnosed with an autoimmune disease. The method involves administering to the patient an amount of a blocking anti-CD22 monoclonal antibody and monitoring the response of the autoimmune disease to the treatment. The method is useful in treating autoimmune disease (e.g. glomerulonephritis, systemic lupus erythematosus, rheumatoid arthritis, psoriasis, ulcerative colitis, Hashimoto's thyroiditis, autoimmune haemolytic anemias, diabetes or allergies) or B-cell malignancies (e.g. lymphomas or leukemias). The present sequence represents the amino acid sequence for heavy chain Vh-D-Jh junction for anti-CD22 antibody from hybridoma HB22-33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating an autoimmune disease or a B-cell malignancy in a human patient comprises administering an amount of an anti-CD22 monoclonal antibody to the patient and monitoring the response of the disease to the treatment.

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine (IGF)-1 and/or -2; and/or (iii) inhibit specifically tyrosine (IGF)-1 and/or -2; and/or (iii) inhibit specifically tyrosine (IGF)-1 and/or epidermal growth factor receptor (EGFR) and/or with or opperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit cransformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel isolated anti-insulin-like growth factor

I receptor (IGF-IR) antibody (I) or its functional fragment, being
capable of binding to human IGF-IR and, if necessary, capable of
specifically inhibiting tyrosine kinase activity of the receptor,
comprising a light or heavy chain having at least one complementary
comprising a light or heavy chain having at least one complementary
comprising a light or heavy chain having at least one complementary
comprising a light or heavy chain having at least one complementary
comprising a light or heavy chain having at least one created
comprising a light or heavy chain having at least one created
comprising a light or heavy chain having at least one treatment
comprising a light or medicament intended for the prevention of the setul in
comprising a light or IGFP with IGF-IR and/or of EGFP with EGFR, and/or of EGFP, and home
comprising a light of the medicament does not induce or only slightly
compressibly IGF-dependent, especially IGF1 and/or IGF2.
character, preferably IGF-dependent, especially IGF1 and/or IGF2.
cueful for preparation of a medicament intended to inhibit the growth
cueful for preparation of tumor cells, preferably IGF-dependent,
cueful for preparation of tumor cells, preferably IGF-dependent.
                                                                                                                                                                                                                                                                                                                                       neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; maculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder;

ö
                             HERZ/neu-dependent cells. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer. (I) is useful in the preparation of a medicament intended for the prevention or for the treatment of psoriasis. (I) is useful in preparation of a medicament intended for the prevention or for the treatment of psoriasis. (I) is useful in preparation of a medicament intended for the specific targeting of a biologically active compound to cells expressing or overexpressing the IGF-IR and/or EGFR receptor is useful for in vitro diagnosis of illnesses induced by an overexpression or an underexpression of the IGF-IR and/or EGFR receptor at any or is useful from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (I), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gene encoding anti-bisphenol A antibody, a recombinant protein and its preparation, a DNA, a vector, a transformant, preparation of a recombinant protein, a kit for determining bisphenol A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2 VQLQESGPGLVKPSETLSLTCTVSGYSITGGYLWNWIRQPPGKGLEWMGYISYDGTNNYK

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF-I and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                         insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

Mol. Immunol. 28, 1063-1072, 1991
A; Title: Molecular characterization of monoclonal anti-steroid antibodies: primary struct and their pH-reactivity profiles.
A; Reference number: A53285; MUD:92017897; PMID:1922102
A; Accession: C53285
A; Status: preliminary
A; Molecule type: mRNA; protein
A; Residues: 1-119 < SAW>
A; Cross-references: UNIPARC:UPI000011D0A5; GB:D12734; NID:g220548; PIDN:BAA02226.1; PID: A; Note: sequence extracted from NCBI backbone (NCBIN:63297, NCBIP:63302)
C; Superfamily: Immunoglobulin V region; immunoglobulin homology
C; Keywords: heterotetramer; immunoglobulin
F; 15-98/Domain: immunoglobulin homology < IPMP>
